CLAIM AMENDMENTS

Claim Amendment Summary

Claims pending

• Before this Amendment: Claims 1-28, 34-42, 45 and 46.

• After this Amendment: Claims 1-26, 34-42, 45 and 46.

Non-Elected, Canceled, or Withdrawn claims: 27 and 28.

Amended claims: 1-13, 26, 34, 35, 38-42, and 45.

New claims: None.

Claims:

1. (CURRENTLY AMENDED) One or more computer-readable media

having stored thereon computer-executable instructions of implementing a kernel

emulator for non-native program modules that, when executed by one or more

processors, causes the one or more processors to perform actions comprising:

intercepting non-native kernel calls from non-native program modules, the non-

native kernel calls calling a native kernel having access to hardware through one or more

device drivers and hardware interfaces native to the native kernel;

converting the intercepted non-native kernel calls into native kernel calls; and

delivering the converted native kernel calls to the native kernel without the non-

native program modules being modified to target a native platform running the native

kernel on which the non-native program modules are not designed to run, thereby

facilitating interoperability of the non-native program modules within the native platform

A kernel emulator implemented at least in part by a computing device for non-

native program modules, the kernel-emulator comprising:

an interceptor configured to-intercept non-native kernel calls that call-a-native

kernel from non native program modules, the native kernel being software that operates

system functions;

a call-converter configured to convert the non-native kernel calls intercepted by

the interceptor into native kernel calls; and

an-I/O unit configured to deliver the native kernel calls converted by the call-

converter to the native kernel.

2. (CURRENTLY AMENDED) One or more computer-readable media as recited in claim 1, wherein the converting further comprises translating An emulator as recited in claim 1, wherein the call-converter comprises a translator configured to translate a non-native paradigm for passing parameters into a native paradigm for passing parameters.

3. (CURRENTLY AMENDED) One or more computer-readable media as recited in claim 1, wherein the converting further comprises translating An emulator as recited in claim 1, wherein the call-converter comprises a translator configured to

translate non-native CPU instructions into native CPU instructions.

4. (CURRENTLY AMENDED) One or more computer-readable media as recited in claim 1, wherein the converting further comprises translating An emulator as recited in claim 1, wherein the call converter comprises a translator configured to

translate addresses from non-native length into native length.

5. (CURRENTLY AMENDED) One or more computer-readable media as recited in claim 1, wherein the converting further comprises converting An emulator as recited in claim 1, wherein the call converter comprises an argument converter

configured to convert non-native argument format into native argument format.

lee&hayes The Business of IP¹⁰

6. (CURRENT AMENDED) One or more computer-readable media as recited in claim 1, wherein the converting further comprises translating An-emulator as recited in claim 1, wherein the call-converter comprises a translator configured to translate words from non-native word size into native word size.

7. (CURRENTLY AMENDED) One or more computer-readable media as recited in claim 1, wherein the kernel emulator further comprises limiting An emulator as recited in claim 1 further comprising a memory constrainer configured to limit addressable memory to a range addressable by non-native program modules.

8. (CURRENTLY AMENDED) One or more computer-readable media as recited in claim 1, wherein the kernel emulator further comprises managing An emulator as recited in claim 1 further comprising a shared-memory-manager configured to manage memory space that is accessible to both native and non-native program modules.

9. (CURRENTLY AMENDED) One or more computer-readable media as recited in claim 1, wherein the kernel emulator further comprises synchronizing An emulator as recited in claim 1 further comprising a shared memory manager configured to synchronize a native shared data structure with a non-native shared data structure.

10. (CURRENTLY AMENDED) One or more computer-readable media as

recited in claim 1, wherein the kernel emulator further comprises:

managing An emulator as recited in claim 1 further comprising a shared-memory

manager-configured to manage memory space that is accessible to both native and non-

native program modules; wherein; and

mapping the shared-memory manager maps versions of process shared data

structures (process SDSs) and versions of thread shared data structures (thread SDSs)

between native and the non-native program modules.

11. (CURRENTLY AMENDED) An operating system on the one or more

[[a]] computer-readable media medium, comprising:

a native kernel configured to receive calls from native program modules; and

a kernel emulator as recited in claim 1 configured to receive and convert calls

from non-native program modules for direct handling by the native kernel without the

non-native program modules being modified to natively call the native kernel, whereby

the calls from the non-native program modules are processed by the native kernel through

the kernel emulator without modifying the non-native program modules.

12. (CURRENTLY AMENDED) An operating system on [[a]] the one or more computer-readable media medium, comprising:

a native kernel configured to receive calls from native APIs;

a kernel emulator as recited in claim 1 configured to receive calls from non-native APIs for direct execution by the native APIs without the non-native APIs being modified to natively utilize the native APIs, whereby the calls from non-native APIs are processed by the native kernel through the kernel emulator without modifying the non-native APIs.

13. (CURRENTLY AMENDED) A method of emulating a kernel for non-native program modules, the method comprising:

intercepting non-native kernel calls from non-native program modules, the nonnative kernel calls calling a native kernel <u>having access to hardware through one or more</u> <u>device drivers and hardware interfaces native to the native kernel that comprises software</u> and operates system functions;

converting the intercepted non-native kernel calls into native kernel calls; and delivering the converted native kernel calls to the native kernel, whereby the non-native kernel calls from the non-native program modules are processed by the native kernel through the conversion without modifying the non-native program modules being modified to target native platform running the native kernel on which the non-native program modules are not designed to run.

lee&hayes The Business of IP™

14. (ORIGINAL) A method as recited in claim 13, wherein the converting step comprises translating a non-native paradigm for passing parameters into a native paradigm for passing parameters.

15. (ORIGINAL) A method as recited in claim 13, wherein the converting step comprises translating non-native CPU instructions into native CPU instructions.

16. (ORIGINAL) A method as recited in claim 13, wherein the converting step comprises translating addresses from non-native length into native length.

17. (ORIGINAL) A method as recited in claim 13, wherein the converting step comprises translating words from non-native word size into native word size.

18. (ORIGINAL) A method as recited in claim 13 further comprising limiting addressable memory to a range addressable by non-native program modules.

19. (ORIGINAL) A method as recited in claim 13 further comprising synchronizing a native shared data structure with a non-native shared data structure.

lee&hayes The Business of IP 14

20. (ORIGINAL) A method as recited in claim 13 further comprising mapping versions of process shared data structures (SDSs) between native and non-native program modules.

21. (ORIGINAL) A method as recited in claim 20, wherein a process

SDS of a native program module includes a pointer to a process SDS of a non-native

program module.

22. (ORIGINAL) A method as recited in claim 20, wherein a process

SDS of a non-native program module includes a pointer to a process SDS of a native

program module.

23. (ORIGINAL) A method as recited in claim 13 further comprising

mapping versions of thread shared data structures (SDSs) data structure between native

and non-native program modules.

24. (ORIGINAL) A method as recited in claim 23, wherein a thread SDS

of a native program module includes a pointer to a thread SDS of a non-native program

module.

25. (ORIGINAL) A method as recited in claim 23, wherein a thread SDS

of a non-native program module includes a pointer to a thread SDS of a native program

module.

26. (CURRENLTY AMENDED) A computer comprising:

one or more processors; and

memory coupled to the one or more processors, the memory storing thereon computer-executable instructions that, when executed by the one or more processors, perform the method as recited in claim 13, one or more computer-readable media having computer executable instructions that, when executed by the computer, perform the method as recited in-claim 13, whereby the non-native kernel calls from the non-native program modules are processed by the native kernel through the conversion without

27-33 (CANCELLED).

modifying the non-native-program-modules.

34. (CURRENTLY AMENDED) A method comprising:

emulating a non-native kernel for a native computing platform by converting nonnative kernel calls calling a native kernel from non-native applications into native kernel
calls to the native kernel, without the non-native applications being modified to target he
native computing platform on which the non-native applications are not designed to run
so that non-native kernel calls that call a native kernel from non-native applications are
converted into native kernel calls to the native kernel, the native kernel comprising
software that operates system functions.

35. (CURRENTLY AMENDED) A method as recited in claim 34, wherein the emulating step further comprises:

translating non-native CPU instructions into native CPU instructions;

translating addresses from non-native length into native length;

limiting addressable memory to a range addressable by non-native program

modules.

36. (ORIGINAL) A method as recited in claim 35, wherein the

emulating step further comprises translating a non-native paradigm for passing

parameters into a native paradigm for passing parameters.

37. (ORIGINAL) A method as recited in claim 34, wherein the

converting step further comprises translating words from non-native word size into native

word size.

38. (CURRENTLY AMENDED) A computer comprising one or more

computer-readable media having computer-executable instructions that, when executed

by the computer, perform the method as recited in claim 34, whereby the non-native

kernel calls from the non-native program modules are processed by the native kernel

through the conversion without modifying the non-native program-modules.

39. (CURRENTLY AMENDED) A computer-readable medium having computer-executable instructions that, when executed by a computer, emulates a non-

native kernel for a native computing platform by converting non-native kernel calls

calling a native kernel from non-native applications into native kernel calls without the

non-native applications being modified to target on the native computing platform on

which the non-native applications are not designed to run performs the method as recited

in claim 34, whereby the non-native kernel calls from the non-native program modules

are processed by the native kernel through the conversion without modifying the non-

native program modules.

40. (CURRENTLY AMENDED) One or more computer-readable media

having stored thereon instructions implementing a kernel emulator for non-native

program modules, the instructions, when executed by a computing device, causing the

computing device to A kernel emulator implemented at least in part by a computing

device to emulate a non-native kernel for a native computing platform so that non-native

kernel calls that call a native kernel from non-native applications are converted into

native kernel calls to the native kernel without the non-native applications being modified

to target on the native computing platform on which the non-native applications are not

designed to run, the native kernel comprising software that operates system functions,

whereby the non-native kernel calls from the non-native program modules are processed

by the native kernel through the conversion without modifying the non-native

applications.

Atty Docket No.: MS1-60 Atty/Agent: Ningning Xu -13-

41. (CURRENTLY AMENDED) One or more computer-readable media having stored thereon instructions implementing the kernel emulator recited in claim 40

An emulator as recited in claim 40, wherein the instructions of implementing the kernel

emulator comprises:

instructions implementing an instruction-translator configured to translate non-

native CPU instructions into native CPU instructions;

instructions implementing an address-translator configured to translate addresses

from non-native length into native length; and

instructions implementing a [[an]] memory constrainer configured to limit

addressable memory to a range addressable by non-native program modules.

42. (CURRENTLY AMENDED) One or more computer-readable media

having stored thereon instructions of an [[An]] operating system on a computer readable

medium, that, when executed on a computing device, cause the computing device to

implement a plurality of modules, the instructions comprising:

instructions of implementing a native kernel configured to receive calls from

native program modules;

instructions of implementing a kernel emulator as recited in claim 40 configured to

receive calls from non-native program modules.

43. (CANCELED).

44. (CANCELED).

lee&hayes The Business of IP 10

45. (CURRENTLY AMENDED) One or more computer-readable media

having stored thereon instructions that, when executed by a computing device, causes the

computing device to implement a kernel emulator for non-native program modules, the

kernel emulator A kernel emulator implemented at least in part by a computing device for

non-native program modules, the kernel emulator comprising software and the kernel

emulator comprising:

an interceptor configured to intercept non-native kernel calls that call a native

kernel from non-native program modules, the native kernel being software that operates

system functions;

a call-converter configured to convert the non-native kernel calls intercepted by

the interceptor into native kernel calls, wherein the call-converter comprises:

instruction-translator configured to translate non-native CPU

instructions into native CPU instructions;

an address-translator configured to translate addresses from non-native

length into native length; and

an I/O unit configured to deliver converted native kernel calls to the native kernel.

wherein the call-converter enables the non-native program modules to call the

native kernel without the non-native program modules being modified to target platform

running the native kernel for which the non-native program modules are not designed.

46. (ORIGINAL) An operating system on a computer-readable medium,

comprising:

a native kernel configured to receive calls from native program modules;

Serial No.: 09/847,535 Atty Docket No.: MS1-665US Atty/Agent: Ningning Xu

IEE A NaveS The Business of IP™

a kernel emulator as recited in claim 45 configured to receive calls from non-native program modules.

47-50. (CANCELED).
